

SolarNet | Providing solutions for tomorrow's problems

Cyber Security

Cyber incidents can take many forms, such as denial of service, malware, ransomware or phishing attacks, to name a few.

With an effective cyber incident response plan, you will be able to detect incidents at an earlier stage and develop an effective defence against the attack.

At SolarNet we have an advisory team that can help you align security into your business strategy, processes and systems without the complexities of the jargon that often comes with understanding how this can be achieved.

We offer a straight forward approach to cyber security underpinned by our knowledge and expertise in this sector.

Here's how we can help you:

🔒 Cyber Security Risk Assessment

Risk assessments can be a complicated, especially for if you don't know what standard to benchmark your security efforts against. Our team of advisers will provide business-driven consultation on the overall process of assessing information risk.

🔒 Cyber Security Risk Management

We will help you develop an information security risk management strategy, enabling you to take a systematic approach to risk management.

🔒 Cyber Security Technical Advice and Guidance

Provide technical advice and guidance on all of your security controls. This will help identify any areas in your security posture that could be bolstered and reduce the likelihood of unauthorised access to your business critical assets and information.

🔒 Cyber Security Tooling and System Integrations

We provide an indepth review of your cyber security tooling or advise you on the most appropriate tooling. In conjunction with a review of your business and IT systems we can also identify potential system integrations that can be leveraged to help improve your cyber incident response processes. Reducing the time to combat and remediate any cyber threats before they damage your brand and reputation.
