

SolarNet | Providing solutions for tomorrow's problems

Protecting the greatest assets in your Educational Setting

If only protecting your pupil, student and young person's data was as simple as protecting them in the school grounds.

Pupils, students and young people learning within a safe and secure digital environment is paramount to their development and essential if they are to achieve the best possible outcome from their journey through education, SolarNet are here to help.

We Are Approved

How safe is your school from an online cyber attack?

Cyber criminals are focussed on the education sector with Ransomware and Phishing attacks becoming more prevalent. These attacks are more sophisticated than ever and are more likely to succeed unless your school has the necessary security controls to stop them and prevent you becoming a victim of cyber crime.

SolarNet offer a comprehensive set of products and services that will keep your school ProtectEd® at all times.

Do you know what I.T assets you have?

In a complex I.T environment it's not always easy to obtain a reliable and comprehensive I.T asset register which identifies:

- All assets including where they are located
- Asset condition and any security risks posed

SolarNet offer an automated I.T asset management system which:

- Discovers all I.T assets and their location on your network
- Identifies I.T asset vulnerabilities
- Integrates with support systems to help manage remediation activities
- Notifies stakeholders of I.T asset issues before they become a bigger problem
- Provides continual checks of I.T infrastructure to aid with compliance, e.g., Cyber Essentials

What would happen if criminals gained access to your ParentPay?

ParentPay is an essential service used by pupils and parents to pay for anything from meals to trips but what would happen if this suffered a cyber attack? What if financial data were stolen and used fraudulently, what impact would that have on your school?

SolarNet in partnership with AdamNetworks offer a Zero Trust solution tailored for education. Deploying our Zero Trust capability ensures your school remains protected, keeping your ParentPay services and school operating normally without risking the loss of financial data.

Could your school function if it was taken offline?

There is an increasing reliance on schools being able to deliver education digitally, whether that's through online learning portals, or through their own home learning environment. How long could your school operate without such a valuable learning aid before it started to affect a student's ability to achieve their true potential?

SolarNet can stop cyber attacks from becoming a reality and provide peace of mind knowing your school will continue to operate within its digital environment without disruption.

What is ProtectEd® by SolarNet?

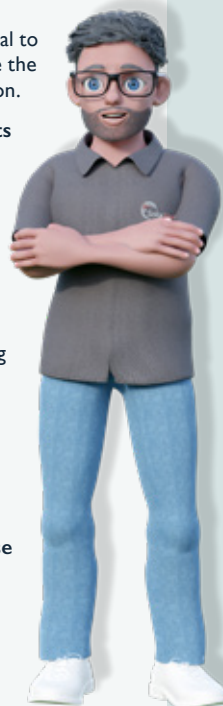

Learning within a safe and secure digital environment is crucial to a student's development and essential if they are to achieve the best possible outcome from their journey through education.

That's why SolarNet offer the ProtectEd® set of products and services tailored for education delivered through our trusted partner network, enabling all educators to have the same cyber security protection that global enterprise-level businesses benefit from today.

What is AutomatEd® by SolarNet?

Education is not immune to the effects of complex and tedious manual processes which get in the way of delivering positive outcomes, leading to frustrations felt by staff, students and parents alike.

That's why SolarNet offer the AutomatEd® set of products and services, tailored for education and focussed on delivering workplace automation. No matter what processes, systems or technologies are in use, SolarNet can provide guidance on how to maximise efficiencies. We believe in working smarter not harder through combining capabilities, and by working closely with teams in education to affect positive change.
